

ROOF ASSEMBLY FOR A VEHICLE

ABSTRACT OF THE DISCLOSURE

The invention relates to a roof assembly for a vehicle having an opening in its fixed roof.

5 The roof assembly comprises at least an upper closure element for selectively closing and at least partly opening the roof opening in the fixed roof of the vehicle, at least a lower closure element for selectively closing and at least partly opening a

10 passage opening in the frame of the roof assembly. At least one transverse edge of the lower closure element is positioned adjacent to another part of the roof assembly in at least one position of the lower closure element. Said at least one transverse edge of

15 the lower closure element and the other part includes an adhering device such as to adhere the transverse edge of the lower closure element to the transverse edge of the other part in said at least one position.
